

ARCHITECTURAL & CIVIL ENGINEERING CAREER EXPLORATION PROGRAM

Architects and Civil Engineers both play a valuable role in the planning, design, and supervision of building sites and structures. Both professions are science-driven careers where accuracy and organization is key.

Individuals working in this field may experience working in an office setting and on-site, watching a project come to life during construction. Per the Bureau of Labor Statistics, demand for these jobs is estimated to grow 4-6% over the next 10 years. Students engaging in this program can look forward to meeting and working on hands-on activities with professionals working at one of the area's leading, and award-winning, firms. This program has limited seats; Students applying for this program should be strongly considering pursuing one of these career paths already.

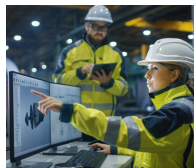

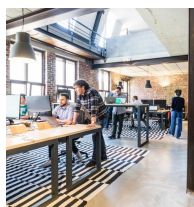

Eligibility: High School Grades 11-12
