

HVAC & PLUMBING CAREER EXPLORATION PROGRAM

Careers in the HVAC and plumbing industry involve the installation and servicing of heating, ventilation, cooling (air conditioning) refrigeration systems as well as the service and installation of pipes and septic systems for factories, homes, and businesses. In both cases, the projected job growth over the next 10 years is above average, with the demand for these careers projected to increase 13% (HVAC) and 14% (Plumbing) according to the Bureau of Labor Statistics. With many on-the-job training and apprenticeship opportunities available in these fields, it's a great time for students looking to start "learning and earning" right away. Students who have an interest in one of these skilled trades will not want to miss the chance to explore these opportunities with a locally-based leader in the industry, family-owned and operated through five generations and 100 years.

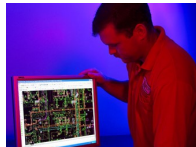

Eligibility: High School Sophomores, Juniors and Seniors

Location: James Craft & Son, Inc.
2780 York Haven Road
Manchester, PA. 17345
