

MANUFACTURING CAREERS EXPLORATION PROGRAM

When you think of Manufacturing do you think of a dirty environment with low-wage workers? Nothing could be further from the truth! Modern manufacturing is done in a clean environment with many highly-skilled workers contributing to the many aspects of the manufacturing process from design, production, and the quality-control that is implemented every step of the way. With TWICE the national average of employees working in Manufacturing, York is the home of many cutting-edge facilities. Students attending this day will get to learn about several different manufacturing facilities in York County directly from a company representative.

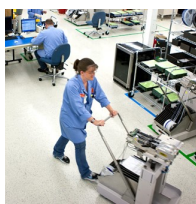

This will be an interactive session so students should come prepared to ask questions and network!
